

Chad Koslovsky

Product Engineer · Full Stack Lead · Applied AI

Loveland, Colorado · chad@koslovsky.xyz

TARGET

Product Engineer (AI) at Mimic · United States

PROFESSIONAL PROFILE

Product engineer and founder with 15+ years building software and systems around hard-to-define product problems. Technomancy IT grew from freelance work into a small technical shop, where I was usually the only engineer or lead engineer owning discovery, architecture, product code, infrastructure, deployment, and support across crypto, security, web applications, and SaaS.

CAPABILITIES

Full-stack product engineering · Applied AI and automation · Technical leadership and collaboration

RELEVANT EXPERIENCE

End-to-end product platform — Relevant work

- Designed and built a Next.js, TypeScript, PostgreSQL, and containerized platform spanning CRM, support, scheduling, meetings, billing, analytics, infrastructure telemetry, and AI-assisted workflows.

Founder-led product delivery — Relevant work

- Earned Upwork's Top Rated badge and ranked among its top 10% of freelancers before building a referral-based practice. Usually served as the only engineer or lead engineer, helping teams ship products and fundraising systems used in raises totaling millions of dollars and managing smart contracts that held millions in value.

Acquired Amazon reseller SaaS — Relevant work

- Designed, built, and operated an Amazon reseller SaaS product with marketplace ingestion, repricing automation, analytics, account workflows, and support built directly into the application.

Applied AI inside real products — Relevant work

- Builds AI into product workflows through retrieval, structured outputs, classification, natural-language interfaces, orchestration, evaluation, and human review while keeping architecture and product judgment explicit.
